How Cheap Baking Powder is Made.

A recent seizure of a lot of "cheap" baking powders by the authorities of a neighboring city has exposed the character of the low priced brands of baking powders which many manufacturers are offering through the country. The price of the powders first attracted attention to them. Samples were taken and analyzed. The official analysis showed the stuff to be "alum powders," composed chiefly of alum, sulphuric acid and pulverized rock. The powders were declared dangerous to health and several thousand pounds were confiscated and destroyed.

It is unsafe to mix food with these so-called "cheap" baking powders. They all show up when analyzed, large percentages of alum and sulphuric acid to which are added various sorts of filling matter both injurious and nasty.

The high class, cream of tartar baking powders are the most economical and wholesome and should always be selected for use.

They will be found cheaper in the end besides making the food better and more healthful.
